

Presentation 10: Loral Skynet's solutions for Rural Communications

Mr. Flávio Bartolomeu da Silva, Manager for Engineering and Regulation, Loral Skynet do Brasil.

Getting better communications to remote areas is critical to the development of the countries. Satellite may be the best technology to bring the benefits of communications to those remote areas. Most of the efforts done in the past to provide communications to remote areas focused on voice communications. With the explosion of the Internet, remote areas are also demanding Internet access. New technologies like DVB-RCS are focusing to provide broadband Internet access and bridge the digital gap between the most populated and rural areas. Loral Skynet will present the efforts are being made to provide Internet access to remote areas around the world.
