

Radio Spectrum related issues on Fixed Wireless Access in China

Speaker TBD

Abstract

China has designated various frequency bands for Fixed Wireless Access (FWA) applications since 1996. Brief introduction will be given about the developments of FWA in China as well as the challenges spectrum managers are facing. This presentation will explain the current regulations and policy on FWA in China. With the demand for FWA spectrum is increasing, the Administration of Chins is working on the frequency planning for future Broadband FWA. Some preliminary ideas in this regard will be introduced.
