

Abstract:

Christoph Legutko/Margit Brandl (Siemens AG):
Regulatory aspects of Spectrum Information and Harmonisation

The presentation discusses regulatory aspects and spectrum policy having in mind spectrum as a basic resource for mobile telecommunications. As global issue, decisions making processes start 8-10 years prior to new mobile system introductions. Harmonised spectrum and related standards are crucial for global mass markets and related economies of scale and thus benefit consumers world wide. Related frequency regulation is therefore a key issue and must meet actual market developments. Industry also relies on exact and up-to-date information about spectrum usage and allocation.
